Identicon Generator in Caché

Hi everyone,

I've created an **Identicon Generator** inspired on Fabio Gonçalves Captcha Validator.

This sample can be used to create Identicons for users of app for example, it can be useful to use in Zen Mojo applications, generating an identifier image based on name of the user by example, but it can be used in others kind of applications too(Zen, CSP etc)

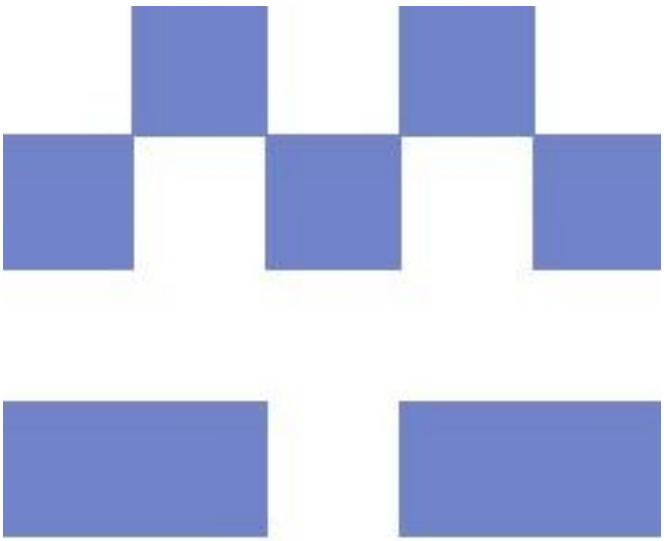

Examples:

First one:

```
PROJECTS>Do ##class(Ikon.Identicon).%New("Intersystems Caché")

File '..\..\CSP\PROJECTS\Identicons\Intersystems Caché' successfully generated!
```

Will generate this:

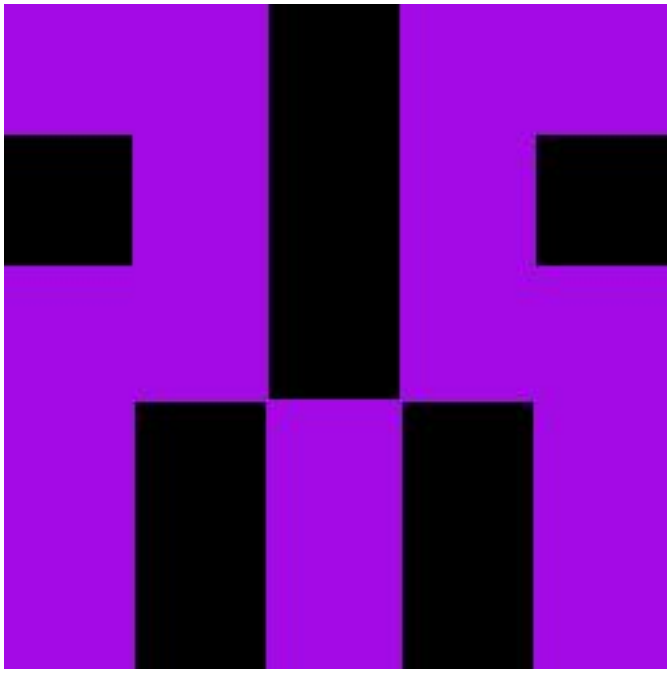

And this:

```
PROJECTS>Do ##class(Ikon.Identicon).%New("Intersystems Ensemble","C:\Identicons\
",250,0,0,0)

File 'C:\Identicons\Intersystems Ensemble' successfully generated!
```

Will generate this:

See my Github project: https://github.com/AndreiLN/Ikon

Best regards,

Andrei L. Nenevê
