Atelier BPL editor

Is there a way to graphically edit BPL processes, or do we still need to use Studio for doing that?

Looking at the documentation, it appear there should be an Atelier BPL editor option available under Open With, but all I have is Atelier Class, HTML, INT, and MAC editors.

There is a BPL editor in the list, but it throws a "Bad editor input" error when trying to open the class file.

I'm running version 1.0.263 that was installed from the WRC distribution of 1.0.262 and then updated. The only other plugins installed are the Eclipse XML Editors.
