[Python-Cache Binding] DLL load failed when trying to import intersys.pythonbind3 using $zf(-1)

I have done Python - Cache binding setup following the guide from http://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY=.... I have also run test.py from sample3 folder and it able to run and complete successfully.

However, when I try to run the same test.py code via $zf, it gives error with exit code 1.

I've tried running help("intersys.pythonbind3") via $zf and also running from Cache terminal as follows:

1. $zf(-1,"C:\Python36\python <path>/script.py")
2. ! C:\Python36\python <path>/script.py

which gives me the following output:

problem in intersys.pythonbind3 - ImportError: DLL load failed: The specified module could not be found.

But running the above directly from command prompt is fine.

Any ideas on this ImportError?

Regards,

Ivan
