Error SOAPACTION value when I call a webservice

Hello all,

When I call a WSDL in php, look this code :

```
// Standard SOAP header for username/password
// From http://stackoverflow.com/questions/13465168/php-namespaces-in-soapheader-child-nodes
class WSSESecurityHeader extends SoapHeader {
    public function __construct($username, $password)
    {
        $wsseNamespace = 'http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secex...';
        $security = new SoapVar(
            array(new SoapVar(
                array(
                    new SoapVar($username, XSD_STRING, null, null, 'Username', $wsseNamespace),
                    new SoapVar($password, XSD_STRING, null, null, 'Password', $wsseNamespace)
                ),
                SOAP_ENC_OBJECT,
                null,
                null,
                'UsernameToken',
                $wsseNamespace
            )),
            SOAP_ENC_OBJECT
        );
        parent::__construct($wsseNamespace, 'Security', $security, false);
    }
}

// Key parameters for connecting to the web service:
$location =
'http://IP:PORT/csp/dsa-cla-prd/com.siemens.med.hs.Country.WebServices.pats.ClassPatientServices.cls';
$uri = "http://intersystems.fr";
$username = "USER";
$password = "PASS";

// If the soap client is to be constructed from the WSDL, or if the WSDL is to be used to generate
// PHP classes (using various tools that exist for that purpose), ?WSDL=1 and the username/password
// need to be tacked on to the end of the URL:
$wsdl = $location . "?WSDL=1&CacheUserName=" . $username . "&CachePassword=" . $password;
echo $wsdl.str_repeat('<br />', 4);

// Create SoapClient Object
$client = new SoapClient(null, array(
    "trace" => 1,
    "location" => $location,
    "uri" => $uri,
    "style" => SOAP_DOCUMENT,
```

```
"use" => SOAP_LITERAL));

// Add security header.
$client->setSoapHeaders(new WSSESecurityHeader($username, $password));

//echo '<xmp>';
//printr($client);
//echo '</xmp>';
// Object with parameter names and values for the SOAP call

try {
    $clsINOUTContext = new stdClass();
    $clsINOUTContext->AccessCode = 'ACC';

    $clsOUTInfosPatient = new stdClass();

    $params = array(
        'clsINOUTContext' => $clsINOUTContext,
        'strINPatientIPP' => "11111111",
        'clsOUTInfosPatient' => $clsOUTInfosPatient
    );

    echo '<xmp>';
    printr($params);
    echo '</xmp>';

    $return = $client->GetPatientInfo($params);
    var_dump($return);
} catch (Exception $e) {
    echo "Exception occurred: " . $e;
}
```

I have this error :

Exception occurred: SoapFault exception: [SOAP-ENV:Client] Erreur dans le Webservice: Erreur interne détectée.
ERROR #6207: Unexpected SOAPACTION value: <http://intersystems.fr#GetPatientInfo> in
C:\wamp\www\clinicom\webservice\Index.php:81 Stack trace: #0
C:\wamp\www\clinicom\webservice\Index.php(81): SoapClient->call('GetPatientInfo', Array) #1
C:\wamp\www\clinicom\webservice\Index.php(81): SoapClient->GetPatientInfo(Array) #2 {main}

Can you help me ?

Thanks a lot for explains,
