Member mentioning

Hi, Community!

With the recent release on Developer Community we have introduced member mentioning.

Now if you want to ping a member with email notification, just place in the post (or comment) following:

`@name.surname`

Once it is published, a member would get the email notification that he was mentioned in particular post/comment.

So, that's how I'm mentioning myself here: [@Evgeny Shvarov](#).

Have a great weekend!
