Getting and Setting mime types.

I am attempting to do two things with the mime types.

Collect the mime type from a stream(%FileBinaryStream) using this syntax:
`myCONTENTTYPE=stream.GetAttribute("Content-Type")`

However, myCONTENTTYPE always comes in empty.

Set the CONTENTTYPE PARAMETER in the OnPage ClassMethod of a ZEN page, using this syntax: s
..`#CONTENTTYPE=myCONTENTTYPE`

However, I cannot seem to get the correct syntax.

I would appreciate any and all help. Thank you.
