Inter Process Communication without storing the data on Cache.Dat

Hello,

I am wondering if there any mechanism available in the Healhtshare where send a request from the service to the operation without storing the Data on CACHE.DAT?

My company going to receive ADT's and CCDA's from an external source (Hospital), The incoming data will have two kinds of patients, our patients, and not our patients. We do not want to keep the data on our servers of those patients that do not belongs to our company due to HIPPA complaint

Looking forward to hearing great ideas from this community.

Thank you

Raghu
