Atelier Intellisense Not Working

Hi Community,

I'm just editing a class in Atelier. I have added below code into the class.

Set tStream=##class(%Stream.GlobalCharacter).%New()

When I type tStream. , It's not automatically suggesting properties of that object instance in Atelier. If I click "Ctrl+Space", It says "No completions available".

Is this functionality not available in Atelier yet Or Should I make some configuration changes in Atelier to make it available?
