How to Search Developer Community Better

Hi, Community!

We have a lot of good articles posted on Community to the date. Even more questions with great answers (see the stats). Thank you for your contribution!

So sometimes it worth to use search to find an answer or the best practices or the post you remember was posted but cannot find.

We have the internal search functionality which you can use from the search field on any page.

But saying frankly today the results of internal search engine leave room for improvement.
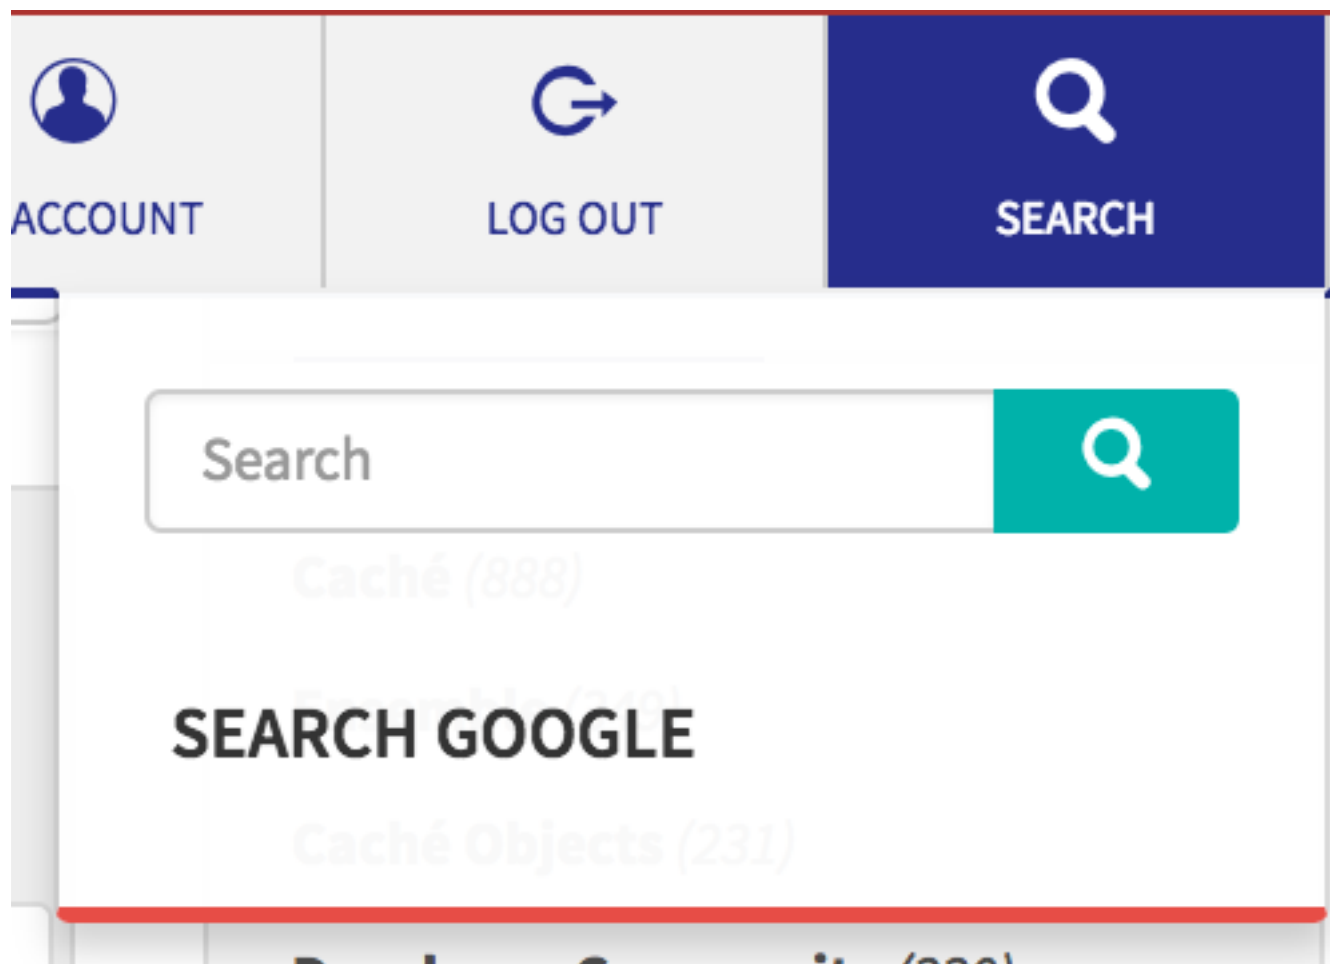

But, the community is open site with text so it's searchable by Google too. So, you can use Google to search the community. To do this type:

```
site:community.intersystems.com your_search_phrase
```

In google search and it would try to find your_search_phrase only within Developer Community pages.

E.g. here are the results for iKnow on Developer Community.

To make the google search usage more handy we introduced this link in Search menu:

Anyway we would fix the internal search engine soon and hope it would be better than Google ;)
