What Is the Best Object Callback for Insert Operations: %OnBeforSave(), %OnAddToSaveSet(), %OnAfterSave()

Hi!

I'm saving object instance using [RestForms](#).

[RESTFormsUI](#) calls %Save() for me, which is great. But I want to set the property CreationDate with the current date for every new record being inserted.

So object callback implementation seems as a reasonable option. I did the following:

```
Method %OnBeforeSave(insert as %Boolean) As %Status [ Private, ServerOnly = 1 ]
{

  if insert s ..CreationDate=$H

  q $$$OK

}
```

And it works fine.

But [Documentation says](#) I'd better use [%OnAddToSaveSet()](#)

What are you using for the callbacks in similar cases?

[#Code Snippet](#) [#Object Data Model](#) [#ObjectScript](#) [#Caché](#)
