Problems using Java Gateway with Caché 2016.1

Hi people,

I am migration my web application of Cache 2013 to Cache 2016, in Cache 2013 I have a integration with a Java aplication using Java Gateway mapping proxy classes and consuming a method that param is a object, and it works perfectly.

But in Cache 2016 this integration don't work, I send the param as object but Cache send as String with the ref of object..

I maked a test, importing two classes used by the Java Gateway (%Net.Remote.Proxy and %Net.Remote.Gateway) of the Cache 2013 to Cache 2016 and integration come back it to works, but I don't see significant changes to justify.

Someone has a same problem?
