Error in the SOAP Wizard

Hi,

In SOAP Wizard, whatever WSDL I pass, I m getting the following error in the SOAP Response. Even If I create my own SOAP Web-Service and pass its WSDL, I am getting the same. But directly If I invoke the Webmethods in the SOAP Web-Service which is being created , I am getting the proper SOAP Response.

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:s="
http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/">
  <SOAP-ENV:Body>
    <SOAP-ENV:Fault>
      <faultcode>SOAP-ENV:Server</faultcode>
      <faultstring>Server Application Error</faultstring>
      <detail>
        <error xmlns="http://intersystems.com/wsp/calculator">
          <text>ERROR #5002: Cache error: <COMMAND>zInvokeService+3^safeena786.Service.calculatorSoap.Add.1 *Function must return a value at zAdd+2^safeena786.Service.calculatorSoap.1</text>
        </error>
      </detail>
    </SOAP-ENV:Fault>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

I want to know how it can be resolved and get the proper SOAP Response of the Webmethod..

Thanks,

Safeena.M
