Output 9876543210 without using numbers

Hi, Community!

Last weekend we held the Final of InterSystems Contest on InterSystems Caché and DeepSee as a part of IT Planet Student Championship in Sochi. BTW, this year we had about [2 000 participants in InterSystems Contest](#).

One of the tasks for the finals was to solve the following with Caché ObjectScript and use the minimum code.

Problem description

Write a method that would return the string **9876543210**, however cls code should not contain numbers 0-9.

The goal is to write the shortest method.

Here's a method signature (it can't be modified):

```
ClassMethod main() As %String
```

And call sample:

```
USER>write ##class(ITPlanet.Task2).main()
9876543210
```

Also, [here's the code](#) to check your result's length:

```
ClassMethod length(class = {$classname()}, method = "main") As %Integer
{
    #dim methodObj As %Dictionary.MethodDefinition
    set methodObj = ##class(%Dictionary.MethodDefinition).IDKEYOpen(class, method)
    quit methodObj.Implementation.Size
}
```

The best result was 25.

What's yours? ;)
