Change login

Hi all,

I wonder how to change the login email that I've in Community.

According to My account - Account setting, I can change it using the <http://login.intersystems.com> portal, however there is not any link or option to change it.

Is there other way to change the email? Currently I'm using the work email and I want to change to personal email.

System Email

E-mail address *

This is the email set in via <http://login.intersystems.com>. To change your email use that portal. All notifications from this site will be sent to this email address

Best regards

P.S. The email that I have associated in Global Master I have already modified it, so if I modify the one in the Community, both accounts will be linked, isn't it?
