InterSystems Caché Project Files and Folders

Hi, Community!

How do you store the source files of your Caché project? What is the directories structure? What are the benefits?

I prefer the following structure:

`/cls/package/subpackage/class.cls`

`/mac/package/routine.mac`

`/int/package/routine.int`

`/inc/macro.inc`

`/dfi/folder/sample.pivot.dfi`

[Example](#)

Benefits:

- folders are packages.
- easy to understand what type of sources are in the project.

What is your approach?
