## iFind and HTML text

I have a class with `text` property, which contains html text (usually pieces, so it may be invalid), here's a sample value:

```
<div moreinfo="none">Word1 Word2</div><br>
<a href = "123" >Word3</a>
```

When I add [iFind index](#) on `text`, there are at least two problems:

- Words like `moreinfo="none">Word1`, so exact match with `Word1` returns nothing
- Irrelevant results for `href` search

How can I pass plaintext into iFind index?

[#iFind](#) [#iKnow](#)
