changed data in field ignored when saving changes

HI Community,

I do have a table with quite some names written in Uppercase:

To simply correct this, I have created a button with some code behind it.:

```
ClientMethod convertToTitle() [ Language = javascript ]
{
    var ctrl = zen('Relation');
    tVar = ctrl.getValue();

    tVar = this.StringConvert(tVar)

    zenPage.getComponentById('Relation').setValue(tVar)
}
```

```
ClientMethod StringConvert(str) [ Language = javascript ]
{
    ///alert (str)
    str = str.substr(0,1).toLowerCase() + tVar.substr(1).toLowerCase();
    ///alert (str)
    var pieces = str.split(" ");
    for ( var i = 0; i < pieces.length; i++ )
    {
        var j = pieces[i].charAt(0).toUpperCase();

        pieces[i] = j + pieces[i].substr(1);
    }

    return pieces.join(" ");
} ClientMethod convertToTitle() [ Language = javascript ]
{
    var ctrl = zen('Relation');
    tVar = ctrl.getValue();

    tVar = this.StringConvert(tVar)

    zenPage.getComponentById('Relation').setValue(tVar)
}
```

```
ClientMethod StringConvert(str) [ Language = javascript ]
```

```
{  
  ///alert (str)  
  str = str.substring(0,1).toLowerCase() + tVar.substring(1).toLowerCase();  
  ///alert (str)  
  var pieces = str.split(" ");  
  for ( var i = 0; i < pieces.length; i++ )  
  {  
    var j = pieces[i].charAt(0).toUpperCase();  
  
    pieces[i] = j + pieces[i].substr(1);  
  }  
  
  return pieces.join(" ");  
}
```

At first place it seems to work 😊 : using the correct button results in:

However when I do save (by the button or code), then the data gets replaced with the original Uppercase data. 😞

Does somebody have a clue why this behavior appears?

Thanks in advance!

By the way: some server side alternative solution sample(s) are more than welcome!
