Atelier 1.1 Beta Updates – July 2017

The Atelier beta update channel:

https://atelier.artifactoryonline.com/atelier/updates/beta/1.1

offers the latest features and bug fixes. It now updates your installation of Atelier to build 1.1.310 for Mac, Windows, Red Hat, SUSE and Ubuntu. Here 's an account of what 's recently been improved:

New Features:

- The SQL parser has been significantly enhanced including performance improvements
- The JavaScript parser has been simplified for performance improvements. The class shown in the example below invokes the JavaScript parser. The "File is too large to parse properly" issue has been fixed.

				Writable	Smart I	nsert 1:1				

Improvements:

- Syntax checking has been fixed for additional functions (\$zjob, \$zobjref)
- BPL is supported for the Ubuntu platform. Please note that some related server fixes are only available from 2018.1.0.
- Miscellaneous UI fixes

Revised update instructions:

Due to recent security enhancements, if you are running Atelier on a Mac using macOS 10.12 or later, your Atelier or Eclipse instance must be installed in the /Applications directory for Eclipse updates to work correctly. When you install Atelier as a stand-alone application, after you have extracted the .tar.gz file, drag the file Atelier.app to the /Applicationsdirectory.

If you haven 't subscribed to the beta channel, please see the Atelier Download page at the following link for details: <u>https://download.intersystems.com/download/atelier.csp</u>
