Connecting to a web service

Hi,

I am new to coding web services and trying to connect to an API that returns its format in xml or json.

I have a class as follows.. when I run I get back a 6059 in my status - Unable to open TCP/IP socket to server

Can someone help me identify what I am missing? Thanks

```
Class Common.WebDownload Extends (%RegisteredObject, %XML.Adaptor)
{

ClassMethod Connect()
{
    Set aa=##class(%Net.HttpRequest).%New()
    Set aa.Server="https://www.actualwebaddresshere.com"
    Set aa.Location="/service/actual location path and my API key here/"
    Set aa.ContentType="text/xml"
    set bb=aa.Get()
    break
}

Method Get(location As %String = "", test As %Integer = 0, reset As
%Boolean = 1) As %Status
```
