[Fixed]Error with ECP

Hello,

I try to create an ECP between to CACHE server.

The ECP is working, the remote DB is created and the namespace is created and linked on the remote DB.

The table appears on the server but when I try to access I get this message:

```
ERREUR #5540: SQLCODE : Message 400 : Process 4076 failed to compile Cached Query Class %sqlcq.###.cls6
with these errors: ERREUR #5002: Erreur Cache: <COLLATION NOT
SUPPORTED>getdependencyclasses+54^%occDepend SQLTEXT: SELECT ...
```

My servers have different cache version: 2016.2 and 2015.2, perhaps that's my problem ?

Thanks in advance

Sébastien
