How To implement full Oauth2 schema on Caché/HealthShare ?

Hi,

I am a beginner on intersystems technologies ! and i want implements Oauth2 for our projects (Angular 2 + Caché REST Backend).

i read the article that the link is below :

<https://community.intersystems.com/post/cach%C3%A9-open-authorization-framework-oauth-20-implementation-part-1>

But : i need to create all servers (Auth and Resource) on Caché and dont' to use google server.

Also, i need to be able to consume Oauth from my web services as caché REST application (whitout csp ui) .

An Idea Please ?

Thank you

Yani
