TrakCare

Hi,

While accessing Trakcare in IE 11 i am getting error:

The Trakcare Layout Editor is not functioning. Please check your browser security setting for scripts and ActiveX controls. You must have ensemble installed locally to use this application.

My security settings are fine and also ensemble installed locally, i know i have to install some Add-ins to for this but i dont know the names which i need to install and from where i can get this, or is there any other way of fixing this problem.

Thanks in advance!!!
