autoExecute="false" is ignored; OnCreateResultSet and OnExecuteResultSet still run on page load

I have a <tablePane> element with OnCreateResultSet and OnExecuteResultSet methods; autoExecute is "false" but the OnCreateResultSet and OnExecuteResultSet methods are nevertheless called on page load.

I want the user to be able to press a button to submit the parameters, then have this button call tablePane.executeQuery() to execute the query.

autoExecute is simply ignored. We're on 2014.1.3 with plans to upgrade to 2016 soon.

Are there more settings I need to set? Or is this attribute simply ignored?

```
 <tablePane id="tblReport" useSnapshot="true" autoExecute="false"
OnCreateResultSet="CreateRS" OnExecuteResultSet="ExecuteRS"
cellSpacing="8" showZebra="true"  showRowSelector="false" >
```

Thanks,

Laura
