## Cache SQL sorted after sorting

I used Cache 2016.

I used the following statement to sort after paging, but suggested an error:

```
SELECT *
FROM
  (SELECT sslog.userRowid,
         sslog.CreateDate,
         sslog.CreateTime,
         Sslog.SSUSR,
         sslog.Terminal,
         ssuser.Initials,
         ssuser.USName
   FROM SUser_Log sslog
   LEFT JOIN DHC_SSuser ssuser ON (Sslog.SSUSR = ssuser.userRowid
                                   OR sslog.ssusr = ssuser.Initials
                                   OR sslog.ssusr = ssuser.USName)

   WHERE ssuser.USName ['admin']
   ORDER BY sslog.CreateDate DESC)
WHERE %VID> 5
```

Also used the following way:

```
SELECT sslog.userRowid,
       sslog.CreateDate,
       sslog.CreateTime,
       Sslog.SSUSR,
       sslog.Terminal,
       ssuser.Initials,
       ssuser.USName
FROM SUser_Log sslog
LEFT JOIN DHC_SSuser ssuser ON (Sslog.SSUSR = ssuser.userRowid
                                OR sslog.ssusr = ssuser.Initials
                                OR sslog.ssusr = ssuser.USName)

WHERE ssuser.USName ['admin']
      AND %VID> 5
ORDER BY sslog.CreateDate DESC
```

But suggested that% VID does not exist.

How can I modify my SQL statement? Thank you!
