Atelier Installation Problems

Ok, I am trying to do my homework here but seem to be sinking.

I installed Atelier from the link [atelier-1.0.0AT.262.0-winx64.exe](#)   from at Atelier home page

(https://download.intersystems.com/download/atelier.csp)

Then I install Java from https://java.com/en/download/win10.jsp

I found the Atelier App but it gives this whole page of stuff and at the top it says I have an exit status code of 13.

I have looked through a number of post on Atelier and now am lost.

Any direction please?
