HealthShare and NHS Care Connect FHIR api

Hi,

Has anyone implemented the NHS Care Connect profile in HealthShare and if so could you share the steps you took?

I am not looking to integrate it into the SDA model, Just looking having the classes within HealthShare and then applying a DTL to convert to HL7 2.x

I was hoping i could just down load the profiles from git hub and import into Studio but it appears I need the XSD to do this, which are not available.

Cheers,

Jason
