Atelier synch loop when adding a CRLF to the end of CSP file

There seems to be a problem with the sync/save. If I open a CSP file, add a CRLF to end of it and save the file I get a sync conflict. This can't be right.

To make matters worse I can then select to the local version and will then end up in an infinite loop where the CSP import/compiler keeps adding more and more CRLFs to the file.

You can see an example here: <https://youtu.be/EY-FA-kOpl>
