Parameters SERVICEINPUTCLASS and SERVICEOUTPUTCLASS - what are they?

Several Ensemble adapters have SERVICEINPUTCLASS and/or SERVICEOUTPUTCLASS parameters defined.

For example:

```
Class EnsLib.HTTP.InboundAdapter Extends EnsLib.TCP.InboundAdapter
{
    Parameter SERVICEINPUTCLASS = "%Stream.Object";
    Parameter SERVICEOUTPUTCLASS = "%Stream.Object";
    ...
}
```

What are they for?
