SQLQuery: Cannot use JSONOBJECT with literals

Hello, I just noticed that the following query is not allowing when using cached queries.

The compiler will accuse the code about missing a closing quote.
Just so you know, if I use this query dynamically it works, so I guess it's related to the code linting.

```
Query T() As %SQLQuery [ SqlProc ]
{
SELECT TOP 3 JSON_OBJECT('lit':'Employee from','t':%TABLENAME,'name':Name,'num':
SSN) FROM Sample.Employee
}
```

The bold part is what is causing the error.

Version 2017.
