## run a cache terminal script from cmd/ batch.

Hello everyone, I'm trying to run a cache terminal script from cmd/ batch.

I run it like this `C:\MyCache\bin#cterm.exe C:\Users\Me\Desktop\cache_scrip.scr`

The command opens a terminal, but nothing happens, no title present, no log file written, no output, it's just stucked.

Here is my script:

```
case match: off
title MyTitle
; wait for the terminal to initialize and ask for our identification
echo: on
wait for:Username
send: MeUser<CR>
wait for:Password
send: mepass<CR>
logfile: C:\Users\Me\Desktop\cache_script.log
pause:10
send: znospace "ME_NAMESPACE" <CR>
wait for:ME_NAMESPACE>
send: do ##class(Me.MeMethod).UpdateRecordForCustomerId(1) <CR>
pause:30
send: do ##class(Me.MeMethod).UpdateRecordForCustomerId(2) <CR>
pause:30
send: do ##class(Me.MeMethod).UpdateRecordForCustomerId(3) <CR>
pause:30
; finish the session
send: <CR>
closelog
; finished
terminate
```

Thank you for your help
