## Query+Response in the same port (QRY A19 + ADR A19)

Hello guys,

I'm trying to achieve the same at this guy:

<https://groups.google.com/forum/#!topic/ensemble-in-healthcare/Hw9cRgVTTGY>

But I couldn't actually figure out how to save the calling application port and then use it in the Business Service to forward the complete response (ADR A19) onto the same port that made the request.

I know it isn't possible to forward message from a Business Process back to a Business Service.

Can you help me out?

Thanks!
