How do I tie all terminal logins in Cache

Hi I am trying to tie all terminal logins in Cache so that rather than the user being presented with the Cache login and password the user is presented with my custom login page.

I can do this via a generic user so that once the generic user logs in they are presented with my Cache login page however is there a way to do this so that I can bypass the below login page and go straight to my login?

Node: myserver, Instance: CACHE

Username:
Password:

Thanks in advance

Jon
