PROTECT error when opening a command pipe

Hi all.

I have been using a command pipe to open/run UNIX scripts for months without issue. We recently installed the 2016 Caché Upgrade and now I'm getting the following error when opening the pipe:

```
<PROTECT> *OPEN[Q](|CPIPE|)
```

I assume some security or permission setting is to blame, but I'm not sure exactly what. Here's the snippet of code...

```
s cpipename="|CPIPE|"
s filepath="/path/script"
?o cpipename:(filepath:"R"):10
```

Any feedback would be greatly appreciated!
