# Why is Atelier 1.1's "Compare With Server's Copy" option not available from document context menu?

When server-side source control such as [Deltanji](#) is being used with Atelier we sometimes want to re-sync the local Atelier copy of a class or routine by pulling the copy from the server.

The 1.1 beta (I have build 351) adds a new option "Server's Copy" to the "Compare With" and "Replace With" submenus on the document's context menu:
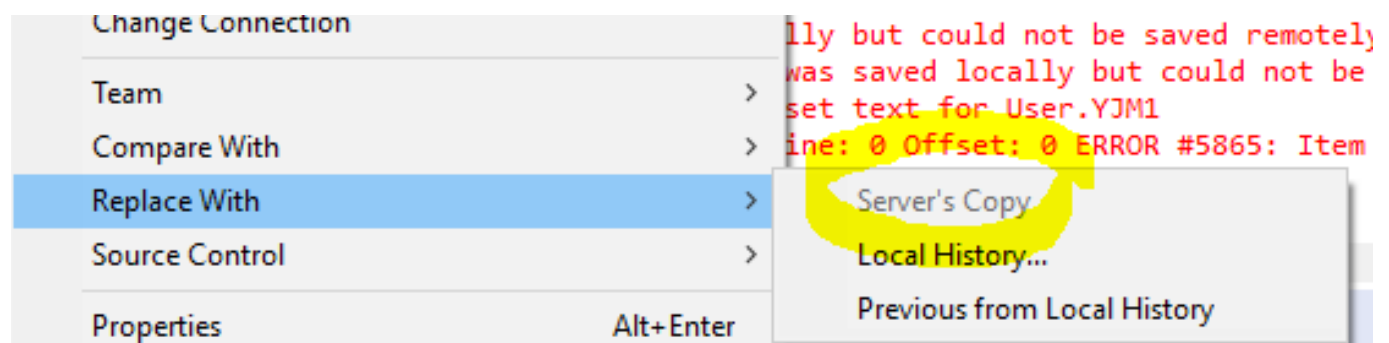

But I have a couple of questions about this.

First, why does it only happen from the context menu launched from the Atelier Explorer, and not also from the one I get from the body of the document itself, i.e.

Second, why is the option disabled on the "Replace With" menu?

If DC isn't the best place to report this kind of thing, I'd willingly use WRC except that there doesn't seem to be a way of creating a ticket about Atelier. The only product options I'm offered are Caché, Ensemble and HealthShare.
