## Implement the Activity Monitor in a Sharepoint Page

Hello,

I would like to implement the Activity Monitor in a Sharepoint page.  
How is it possible to integrate only the Zen element?

Is it necessary to develop a CSP application in which this element exists?

Name	Site Dimension	Total Count	Count Trend	Avg. Duration	Std. Deviation	Duration Trend
1 COW_Bof_Router (NTVENSEMBLE03.KLHS.DE:IE20152:TEST_KLHS)	All	3		0.010	0.008	
2 Router HL7 an Subsysteme (NTVENSEMBLE03.KLHS.DE:IE20152:TEST_PATIENTENDATEN)	All	120		0.045	0.021	
3 Router HS-HL7 an Subsystem (NTVENSEMBLE03.KLHS.DE:IE20152:TEST_PATIENTENDATEN)	All	120		0.005	0.008	
4 SAP-ICM_Router (NTVENSEMBLE03.KLHS.DE:IE20152:TEST_PATIENTENDATEN)	All	120		0.039	0.016	
5 fromSAP_KN11 (NTVENSEMBLE03.KLHS.DE:IE20152:TEST_PATIENTENDATEN)	All	3		0.014		
6 Gesamt		366				

Has anyone done this before and can I get a tip?

With kind regards  
Armin
