Create Custom Table or View

Hi ,

I am newbie working on Cache .

I have a global ^BB("QA",QDJ,QTM+i) , i want to create a table or a view to access the data from this.

I am expert in creating tables & views on RDBS like Oracle, SQL server. But no idea on Cache.

Can someone guide me from scratch how to pull the data from the global.

I have installed Cache Studio on my machine.

Regards
