New Video: A Mocking Framework - Laugh at Unit Tests

Hi, Community!

Please welcome a new session recording from Global Summit 2017:

[A Mocking Framework: Laugh at Unit Tests](#)

This video shows how to extend the Eclipse Unit Test framework to simulate the behavior of a real method/object.

The approach is:

- to give an overview of why a Mocking framework helps and how it works,
- to show the power of using a Mocking framework by giving an extensive demonstration.

The code for the demonstration given during this presentation is available in [this article](#).

You can also see the [additional resources here](#).

Enjoy! 🙂
