EnsLib.SQL.Snapshot - Limitation of RowCount???

We are trying to convert some of our SQL Service Integration Service jobs from Visual Studio to Ensemble. If we execute a Stored Procedure within SQL Server Management Studio it is returning approx 12,000 rows. However when Ensemble executes the same Stored Procedure it is only returning 250 rows.

Is there a limitation to EnsLib.SQL.Snapshot?

This is how we are calling the Stored procedure

```
Method usInterfaceEnsSelectPER355MC(pRequest As
osuwmc.SSIS.DataStructures.InputPER355MC, Output pResponse As EnsLib.SQL.Snapshot) As %Status
{
Set SPQuery = "{ ?= call dbo.usInterfaceEnsSelectPER355MC()}"

s parm=1
s parm(1,"SqlType")=$$$$SQLVARCHAR
s parm(1,"IOTypes")=$$$$SQLPARAMOUTPUT

set tSC = ..Adapter.ExecuteProcedureParmArray(.SelectPER355MC,.output,SPQuery,"oi",.parm)

if tSC = 1
{
set pResponse = SelectPER355MC.GetAt(1)
}

Quit tSC
}
```

Thanks

Scott
