Problem logging in to csp pages using LDAP authentication

Hi,

I am getting the following error while logging in using LDAP authentication,

"An error occurred with the CSP application and has been logged to system error log (^ERRORS)". I've set the connection up and using Authentication Test was successful. I seem to be able to login as well but keep getting that error. If I allows unauthenticated access then the page works but changing it to LDAP is not working.

The LDAP account once created in Cache has U access to the resource related with the web application.

Also, when I check the ^ERRORS variable there is no data there.

Kind regards,

Alice
