Record mapper xml to a xml output file

I have a batch record mapper that reads a csv file and passes the message to a process that uses the `EnsLib.MsgRouter.RoutingEngine` and would like to pass the message to an operation that will output that as a XML file but so far been unlucky as the operation that I use , uses the `EnsLib.EDI.XML.Operation.FileOperation` which only works with the messages("BusinessOperation class for writing XML messages to a file. Works with XML messages of type `EnsLib.EDI.XML.Document`.") is there a way to achieve this or somewhere to read in order to achieve this I have asked before on this [post](#) but the answers I got never helped so any ideas appreciated thanks in advance
