Database is mounted read only and I can't change it

I have a couple of new namespaces/databases that are read-only. I don't remember changing them to read-only, and although my username has %all (I installed the system), I am unable to change the "Always mount as read-only" property.

What am I missing?

Thanks,

Laura

Database Properties

Name	<input type="text" value="PMG"/> <small>Required.</small>					
Directory	<input type="text" value="e:\datasets\pmg\"/>					
Encrypted	No
