Atelier 1.1 Beta Updates – October 2017

Atelier 1.1.386 is now available! If you haven't subscribed to the NEW Atelier Beta channel, please follow the instructions on the [Atelier Download](#) page.

With this update, you can:

- modify legacy files without first converting them to the UDL format
- create debug configurations that use a CSP page as an entry point
- configure any Eclipse project as an Atelier project
- Open Declaration for macros

These are just a few highlights. Please see the [Atelier 1.1 Beta Update notes](#) for a detailed list of improvements. As always, your feedback is welcome.
