how to write 'set' for a property

Hello Community,

I have a simple question but somehow hard to find the solution:

this is a property in my class:

Property RelationAID As ZenCrm.Relationtypes;

this is my method to save:

```
ClassMethod PopulateMatrix(tvar1, tvar2) As %Status
{

set RelationMatrix=##class(ZenCrm.RelationMatrix).%New()
set RelationMatrix.RelationAID = tvar1
set RelationMatrix.RelationAType= tvar2
do RelationMatrix.%Save()

quit $$$OK
}
```

However the 'set' line does not work for the 'related properties.

I have tried: set RelationMatrix.Relationtypes.RelationAID but this failed.

Any suggestion? thanks!
