Indexing null value

Dear community!

I have problem with index NULL value. Unique index doesn't work for this case. If I use insert and one of parameter is "NULL". Message of constraint doesn't appear and row is inserted into table successfully. How Can I use index with NULL?

```
Class TestClassIndx Extends %Persistent
```

```
{
```

```
Property name As %String [ Private ];
```

```
Property age As %String [ Private ];
```

```
Property country As %String [ Private ];
```

```
Index IndextestUniq On (name, age, country) [ Unique ];
```

```
}
```

```
INSERT INTO TestClassIndx (name,age,country) VALUES ('1','2',NULL)
```

Best Regards
