Facing an issue in Restful Api webservice.

Hi Guys,

Can you please guide me to get rid of this issue. Please find the image files with this post.

Please let me know, before we are developing an API what are all the setup/Configuration(Apache/web server) need to do in my machine.

If any lead would be appreciated.

I don't know, in XMLNamespace parameter which URL need to use.

```
/// Sample RESTful Webservices
Class REST.Dispatch Extends %CSP.REST
{
    ▢XData UrlMap [ XMLNamespace = "http://www.w3schools.com" ]
    {
        ▢<Routes>
            <Route Url="/:Name" Method="Get" Call="HelloWorld"/>
        </Routes>
    }

    ▢ClassMethod HelloWorld(Name As %String) As %Status
    {
        W "Name: " _Name, !
        Q $$$OK
    }
}
```

Facing an issue in Restful Api webservice.
