Developer Community GitHub

Hi, Community!

I'm pleased to share that we have a dedicated InterSystems Developer Community GitHub - github.com/intersystems-community!

InterSystems Developer Community
http://community.intersystems.com

Repositories 44 | People 20 | Teams 0 | Projects 0 | Settings

cache-iat-pubsub
Forked from intersystems-ib/cache-iat-pubsub
Simple Publisher - Subscriber model implemented using InterSystems Caché
cacheobjectscript-udl
Apex 6 Updated 30 minutes ago

DeleteHelper
Forked from tanifgit/DeleteHelper
A Super class for adding a code-generator %OnDelete method
cacheobjectscript-udl
Apex 3 Updated 34 minutes ago

Top languages
Apex JavaScript Visual Basic Go OpenEdge ABL

People 20 >

What is it?

It's a list of repositories which InterSystems Corporation introduces to share with Developer Community, or what we fork from other repositories to highlight to Developer Community. The key intent is to share frameworks, tools, and solutions with Developer Community.

What are the projects?

In this hub, you would see tools, frameworks, technology and solution examples, best practices, code snippets - the software, which either utilizes InterSystems Data Platform or is intended to scale, monitor, test, deploy InterSystems Data Platform solutions.

What are the licenses?

Generally, all the projects are free to use and go with MIT License.

Is there any support from InterSystems for the projects?

No. InterSystems doesn't support any of the tools, projects or solutions listed here. All the projects go as is, use it at your own risk. But interesting projects are supported by Developer Community members. So everyone is very welcome to provide issues, fork and contribute via pull requests.

I want my project to be listed on InterSystems Developer Community Hub. What should I do?

Tell about your solution on Developer Community or on [Global Masters](#) and we'll fork it. Perhaps, we already did it)

There some general requirements for repositories:

1. A project should use InterSystems Data Platform or provide services for it.
2. Caché ObjectScript sources should be presented in UDL. Check other [UDL](#) projects.
- 2a. Source code should obey [COS Guidelines](#), or any other publicly listed guidelines.
3. A project should have a filled 'README.md' file with sections with at least two sections: Description, Installation.
4. Provide a license (MIT License) for your repo.

Please, provide your thoughts, ideas, new requirements, etc in the comments below.

Enjoy [Developer Community GitHub](#) and share your great framework, libraries and solutions with InterSystems Developer Community!
