Atelier Evaluation Sandbox?

Hello everyone, I work for a company that currently uses Studio on version 2016.1.2, and will be looking at options to upgrade to 2016.2 and beyond. This would also include the potential to switch from Studio to Atelier, however there are a lot of workflow changes and new features to test.

Does Atelier have a simple way to evaluate what it has to offer without needing to setup an entire separate environment? How did your organization demo its features before committing?

Thank you! 👍
