OLE DB provider 'MSDASQL' for linked server returned data that does not match expected data length for column

I setup a linked server to a cache database to query the data and when I try an query the data I get

OLE DB provider 'MSDASQL' for linked server 'xxx' returned data that does not match expected data length for column '[MSDASQL].CSFAELIGVENCITY'. The (maximum) expected data length is 20, while the returned data length is 23.

Should I be using a different driver when setting up the DSN?
