Windows executable from a Cache MUMPS routine

This is probably a very naive question but :
Is it possible to create a Windows executable file from a Cache MUMPS (COS) routine, such that the routine can be run directly from Windows ?
If so, could some kind soul direct me to a source of information that describes the process.
I am using the free Intersystems Cache installation (CachePCkit V2017.1) on Windows 10 for my own use & personal development.

Thanks
