## Read values from JSON in %CSP.Request

(I am new to this language) I have got a JSON request to handle in a web application which is in %CSP.Request object. But the request which I am going to handle is of type array of objects.

like,

```
[
  {
    "Name": "bat"
  },
  {
    "Name": "Cat"
  },
  {
    "Name": "rat"
  },
  {
    "Name": "mat"
  },
  {
    "Name": "hat"
  },
  {
    "Name": "chat"
  },
  {
    "Name": "please"
  },
  {
    "Name": "help"
  },
  {
    "Name": "me"
  },
  {
    "Name": "in"
  },
  {
    "Name": "getting"
  },
  {
    "Name": "the"
  },
  {
    "Name": "value"
  },
  {
    "Name": "of"
  },
  {

```

```
    "Name" : "nameFromObjectInsideArray"  
  }  
]
```

my requirement is, i need to extract the value from the " Name " property which is an array of objects.

[#JSON](#) [#Frontend](#) [#Caché](#)
